Meta Title

www.finestredatetto-elettrolux.it

Meta Description

www.finestredatetto-elettrolux.it

❌ The meta description tag is missing from your page. You should include this tag in order to provide a brief description of your page which can be used by search engines. Well-written and inviting meta descriptions may also help click-through rates to your site in search engine results.

HOW TO FIX META DESCRIPTION
In order to pass this test you must include a meta-description tag in your page header (**<head>** section):

```
<head>
 <meta name="description" content="type_your_description_here">
</head>
```

Note that in HTML the **<meta>** tag has no end tag but in XHTML this tag must be properly closed.
Meta description can have any length but a good practice is to keep this under 160 characters (search engines generally truncate snippets longer than this value).

✔ The meta description of your page has a length of 440 characters. Most search engines will truncate meta descriptions to 160 characters.

<h1> Headings Status

www.finestredatetto-elettrolux.it

❌ Your page does not contain any H1 headings. H1 headings help indicate the important topics of your page to search engines. While less important than good meta-titles and descriptions, H1 headings may still help define the topic of your page to search engines.

HOW TO FIX <H1> HEADINGS STATUS
In order to pass this test you must indentify the most important topics from your page and insert those topics between `<h1>...</h1>` tags.
Example:

```
<h1>Important topic goes here</h1>
...
<h1>Another topic</h1>
```

Robots.txt Test

www.fakro.it

✔ Congratulations! Your site uses a "robots.txt" file: http://www.fakro.it/robots.txt

www.finestredatetto-elettrolux.it

❌ Your site lacks a sitemap file. Sitemaps can help robots index your content more thoroughly and quickly. Read more on Google's guidelines for implementing the sitemap protocol.

HOW TO FIX SITEMAP TEST

In order to pass this test you must create a sitemap.xml file for your website. Some of the best practices are listed below:

- It is strongly recommended that you place your sitemap at the root directory of your website: **http://yourwebsite.com/sitemap.xml** But in some situations, you may want to produce different sitemaps for different paths on your site (e.g., security permission issues)
- Sitemaps should be no larger than 10MB (10,485,760 bytes) and can contain a maximum of 50,000 URLs. This means that if your site contains more than 50,000 URLs or your sitemap is bigger than 10MB, you must create multiple sitemap files and use a **Sitemap index file**
- All URLs listed in the sitemap must reside on the same host as the sitemap. For instance, if the sitemap is located at **http://www.yourwebsite.com/sitemap.xml**, it can't include URLs from **http://subdomain.yourwebsite.com**
- Once you have created your sitemap, let search engines know about it by submitting directly to them, pinging them, or adding the sitemap location to your **robots.txt** file
- Sitemaps can be compressed using gzip, reducing bandwidth consumption

sitemap.xml example:

```xml
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
<url>
 <loc>http://www.yourwebsite.com</loc>

SEO Friendly URL Test

www.finestredatetto-elettrolux.it

❌ We have found 2 URLs that are not SEO friendly!

→ http://www.finestredatetto-elettrolux.it/?page_id=2184
→ http://www.finestredatetto-elettrolux.it/?page_id=2163

HOW TO FIX SEO FRIENDLY URL TEST
- In order for URLs to be SEO friendly, they should be clearly named for what they are and contain no spaces, underscores or other characters. You should avoid the use of parameters when possible, as they are make URLs less inviting for users to click or share.
- If your website is new and is not indexed by search engines you can replace underscores with hyphens or redirect those links to URLs that use hyphens.BUT, if your website is ranked well by search engines you do not need to do this (probably you have other ranking factors working very well).
- The general advice remains: build links that contain hyphens rather than underscores and avoid dynamic URLs.

✔ Congratulations! All links from your webpage are SEO friendly.

Image Alt Test

www.finestredatetto-elettrolux.it

⚠ Your webpage has **7** 'img' tags and **3** of them are missing the required 'alt' attribute.

HOW TO FIX IMAGE ALT TEST
In order to pass this test you must add an **alt** attribute to every **<img>** tag used into your webpage.
An image with an alternate text specified is inserted using the following HTML line:

```
<img src="image.png" alt="text_to_describe_your_image">
```

Remember that the point of alt text is to provide the same functional information that a visual user would see. Search engines, users who disabled images in their browsers and other agents who are unable to see the images on your webpage can read the alt attributes assigned to the image since they cannot view it.

Inline CSS Test

www.finestredatetto-elettrolux.it

❌ Your webpage is using **12** inline CSS styles!

HOW TO FIX INLINE CSS TEST

It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.

- check the HTML code of your page and identify all style attributes
- for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute

For example:

```
<!--this HTML code with inline CSS rule:-->
<p style="color:red; font-size: 12px">some text here</p>

<!--would became:-->
<p>some text here</p>

<!--and the rule added into your CSS file:-->

(i[r].q=i[r].q||[]).push(arguments)},i[r].l=1*new Date();a=s.createElement(o),

ga('create', 'UA-XXXX-Y', 'auto');
